# Mathematics 2260H - Geometry I: Euclidean Geometry <br> Trent University, Winter 2021 <br> <br> Assignment \#7 - Angle Bisectors <br> <br> Assignment \#7 - Angle Bisectors <br> Due on Friday, 12 March. 

1. Suppose we are given $\angle B A C$, where $A B$ is part of line $m$ and $A C$ is part of line $n$. Let line $\ell$ be the angle bisector of $\angle B A C$. Show that a point $P$ is on $\ell$ if and only if $P$ is equidistant from $m$ and $n$. [5]

2. Suppose $a, b$, and $c$ are three lines which are not concurrent and such that no two are parallel. Find all the circles which are tangent to all three lines. [5]
Note. 2 is the LLL case of the Apollonian problem.
