

Mathematics 1110H – Calculus I: Limits, derivatives, and Integrals

TRENT UNIVERSITY, Summer 2018

[In Peterborough!]

Instructor

Stefan Bilaniuk (pronounced Стефан Біланюк)

office: GCS 337

Office hours: Monday and Wednesday 12:00-12:50,
or by appointment, or just drop by!

phone: 705 748-1011 x7474

home: 705 742-7862 [Do not call 21:00-08:00 unless it's an emergency.]

e-mail: sbilaniuk@trentu.ca [If it's important, please call or drop by.]

web: euclid.trentu.ca/math/sb/

Department of Mathematics

Gina Collins

office: SC 327

hours: TBA

phone: 705 748-1011 x7715

e-mail: math@trentu.ca

Prerequisite: Grade 12U Advanced Functions or equivalent with at least 60%.

Strongly Recommended: Grade 12U Calculus and Vectors or equivalent.

Meetings

Mondays and Wednesdays 09:00-11:50 in GCS 108. We will usually employ the first 30–40 minutes as tutorial time and to write the quizzes, and the remainder of the time for lectures.

Marking Scheme

There will be at least nine quizzes, at least five assignments, a test, and a final examination. These will weigh as follows in the final mark:

Best 8 quizzes (4% each)	32%	Test	15%
Best 4 assignments (5% each)	20%	Final examination	33%

Please note that work worth at least 25% of the course should be completed, marked, and returned by the final date (Tuesday, 29 May) to withdraw from the course without academic penalty. Students who miss the test or more than one quiz for reasons beyond their control should contact the instructor as soon as possible to arrange to write a make-up. Assignments will not normally be accepted after the due date; students unable to hand in the assignments in time for reasons beyond their control should contact the instructor as soon as possible. Note that there is no attendance requirement *per se*, but the consequences of missing classes are ultimately the students' responsibility to deal with.

This scheme may be modified for individual students in *exceptional* circumstances, such as a lengthy absence due to illness. Any such modification will require the agreement of both the student and the instructor.

Content and Learning Outcomes

MATH 1110H is an introduction to the concepts and techniques of single-variable differential and some integral calculus, with some applications to other areas of mathematics and science. Upon successful completion of this course, a student should be able to:

1. Compute limits of functions, using both direct (*e.g.* algebraic) and indirect (*e.g.* squeeze-play) methods.
2. Determine where and whether functions are continuous, and identify and classify points of discontinuity.
3. Differentiate a wide class of single-variable functions, including polynomials, algebraic functions, trigonometric functions, exponential and logarithmic functions, and sums, products, quotients, compositions, and inverses of these functions. Integrate such functions using methods up to and including substitution.
4. Use the first and second derivatives and asymptotics of a function to obtain qualitative information about that function, such as intervals of increase or decrease, concavity, maxima and minima, existence and uniqueness of roots. Use this information to sketch the graph of the function.
5. Use derivatives to solve applied problems involving rate-of-change, linear approximation, and optimization. Understand the meaning of core calculus concepts in simple applications to physics, engineering, economics, biology, and other sciences.
6. Use integration to compute areas under curves and the volumes of rotationally symmetric solids.
7. Have sufficient abstract conceptual understanding of continuity, derivatives, integrals, and antiderivatives to can understand the main ideas in the proofs of some of the classical results of calculus (*e.g.* the Mean Value and Squeeze Theorems) and understand and use the statements of others (*e.g.* the Fundamental Theorem of Calculus).

Schedule

In terms of content, this schedule should be taken with a grain of salt: no lesson plan survives contact with students unchanged. We will speed up or slow down, and perhaps rearrange some material, depending on how things go. Please note that while we will not fully cover the content of every chapter, we will from time to time cover bits of material that is not in the textbook. In particular, some assignments will likely involve using Maple or similar software to plot functions and solve calculus problems.

Week 0. *Classes begin on Thursday, 3 May. We don't meet until the following Monday . . .*

Week 1. (7-11 May) Chapters 1–2: Functions, limits, continuity, definition of the derivative. Quiz #1 on Wednesday, 9 May.

Week 2. (14-18 May) Chapters 3–4: Derivatives, curve sketching, Product, Quotient, and Chain Rules, trigonometric functions. Quiz #2 written and Assignment #1 due on Monday, 14 May; Quiz #3 written on Wednesday, 16 May.

Week 3. (21-25 May) *University closed on Monday, 21 May: Victoria Day. No class!* Chapters 4–5: Exponential, logarithmic, and hyperbolic functions, curve sketching. Quiz #4 written and Assignment #2 due on Wednesday, 23 May.

Week 4. (28 May – 1 June) Chapter 6: applications of differentiation, optimization. Test written on Monday, 28 May; Quiz #5 written and Assignment #3 due on Wednesday, 30 May. *The last date to drop this course without academic penalty is Tuesday, 29 May.*

Week 5. (4-8 June) Chapters 7–8: Integrals, the Fundamental Theorem of Calculus, techniques of integration. Quiz #6 written on Monday, 4 June; Quiz #7 written and Assignment #4 due on Wednesday, 6 June.

Week 6. (11-13 June) Chapters 8–9: Techniques of integration, applications of integration. Quiz #8 written on Monday, 11 June; Quiz #9 written and Assignment #5 due on Wednesday, 13 June. *Wednesday, 13 June, is the last day of classes.*

Examination Period. (14-17 June) Exam schedule to be announced.

Academic Integrity

Academic dishonesty, which includes plagiarism and cheating, is an extremely serious academic offence and carries penalties varying from a 0 grade on an assignment to expulsion from the University. Definitions, penalties, and procedures for dealing with plagiarism and cheating are set out in Trent University's Academic Integrity Policy. You have a responsibility to educate yourself – unfamiliarity with the policy is not an excuse. You are strongly encouraged to visit Trent's Academic Integrity website to learn more – www.trentu.ca/academicintegrity

For clarity, the following guidelines will apply in MATH 1110H:

You are permitted and encouraged to work with others and ask anyone willing (especially the instructor!) for explanations, hints, and suggestions on the assignments, and to consult whatever sources you wish. However, **all work submitted for credit must be written up entirely by yourself, giving due credit to all relevant sources of help and information. For the quizzes, test, and final exam, you may not give or receive any help**, nor use any aids except for a calculator (any that you like) and one letter- or A4-sized aid sheet with whatever you want on all sides of it, except with the instructor's express permission.

Access to Instruction

It is Trent University's intent to create an inclusive learning environment. If a student has a disability and/or health consideration and feels that he/she may need accommodations to succeed in this course, the student should contact the Student Accessibility Services Office (SAS), Blackburn Hall Suite 132, 705 748-1281, sas@trentu.ca. For Trent University in Oshawa Student Accessibility Services Office contact 905 435-5102, ext. 5024. Complete text can be found under Access to Instruction in the Academic Calendar.

Web page

This course will make at most minimal use Blackboard, and perhaps none at all. A web page at euclid.trentu.ca/math/sb/1110H/ will have hopefully-up-to-date information and all handouts, as well as material from a number of previous iterations of first-year calculus taught by the instructor.
