

**Mathematics 1110H – Calculus I: Limits, Derivatives, and Integrals**

TRENT UNIVERSITY, Summer 2025 (S62)

**Quiz #5 – Optimization**

*Due on Tuesday, 8 July.\**

1. Find the maximum possible area of a rectangle that can be inscribed in a semicircle of radius  $r$ , as in the diagram below. [5]

**Algorhyme**

I think that I shall never see  
a graph more lovely than a tree.  
A tree whose crucial property  
is loop-free connectivity.  
A tree that must be sure to span  
so packet can reach every LAN.  
First, the root must be selected.  
By ID, it is elected.  
Least-cost paths from root are traced.  
In the tree, these paths are placed.  
A mesh is made by folks like me,  
then bridges find a spanning tree.

*Radia Perlman*

\* You should submit your solutions via Blackboard's Assignments module, preferably as a single pdf. If submission via Blackboard fails, please submit your work to your instructor by email or on paper. You may work together and look things up, so long as you write up your submission by yourself and give due credit to your collaborators and any sources you actually used.
